STRAWBERRY ONE OF BEST FRUITS

Plants Are Easily Handled and Can Be Purchased at Small Cost From Nurseryman.

REQUIRE VERY LITTLE SPACE

May Be Grown in Hills or in Narrow or Wide-Matted Rows-Give Frequent Cultivatic. and Hoeing During Season.

or in narrow or wide matted rows, getting a good stand of turnips. says the United States Department of | The usual custom is to harrow the Agriculture. For very small areas, ground to a smooth, even surface, then plants set in hills close together will sow the seed broadcast, trusting to no doubt produce the most and largest fruit, but will require more care than matted rows.

For hill growing, set the plants one foot apart in the row and have the rows just far enough apart to cultivate easily, say from two to three feet; or set rows a foot apart in double rows and have a space of two or three feet between the double rows. Keep all runners cut off and give good cultivation, so as to make extra strong plants. Some of the choicest varieties for hill culture are the Marshall and Chesapeake of the single crop kind and the Superb and Progressive of the everbearing varieties. The everbearing varieties will no doubt be most satis factory for hill culture.

Starting for Matted Rows. To start matted rows, set the plants 18 inches apart in rows from three to four feet apart. For a narrow matted row, train the first runners along the plants crowd each other; have them

Everbearing Varieties Are Most Satisfactory for Hill Culture.

and make strong plants for fruiting curately. the next year. Pick off all blossom fruit in the fall. When the ground freezes cover the plants or the entire excellent for this purpose. The obat the rate of \$46 a ton. keep the ground from freezing and IMPORTANT ORCHARD SPRAYS ture, because this freezing and thawing will slowly lift the plants out of Insecticides Are Made Use of for

the ground. Nitrate of Soda Helps. In the spring when the plants begin to blossom spread nitrate of soda along each side of the row, using one year, rake off the mulch as soon as erally best, however, to start a new bed every second year.

Soy Beans Annual Crop. Soy beans is an annual crop and can be planted in some of the ground which was in corn last year and which might otherwise be put in corn again

Soy Bean to Replace Corn. farmers can use the soy bean to re- planting. This will give plenty of time place corn this season is to grow it to replace any poor ones before planttwo to three tons of hay per acre when seeded at the rate of about a bushel per acre.

Pure Farm Seed. Plan to plant nothing but the best seed you can get this spring. Seed grown under conditions similar to your own farm usually will give the breeding. Farmers and truck growers

Good Stand Depends on Weather and Soil Conditions.

Customary Method Is to Sow the Seed Broadcast and Trust to Luck for Good Yield-Store in Pits or a Cool Cellar.

(Prepared by the United States Departmen of Agriculture.) Throughout the greater part of the North, the old settlers say, "Plant turnips the 25th of July whether wet or dry." While this is not absolutely true, it is customary to plant turnips (Prepared by the United States Department the latter part of July on land from which an early crop of potatoes, beets, Strawberries are so easily handled or some other early vegetable has and require so little room, that if been removed.
